

# BanjoMaster: Mobile Running & Sharing Guide

**BanjoMaster Visualizer** is built as a mobile-optimized **Progressive Web App (PWA)**. It requires no App Store or Google Play Store download, works offline, and can be shared with anyone via a single web link or QR code.

---

## 1. Free 1-Minute Live Hosting (To Run on Any Phone & Share Links)

Because the app consists of standard static web files (index.html, manifest.json, sw.js, and app icons), you can host it for free in under 60 seconds using any of these options:

### Option A: Drag-and-Drop (Netlify Drop — No coding required)

1. Go to [Netlify Drop \(app.netlify.com/drop\)](https://app.netlify.com/drop) in any browser.
2. Drag and drop the unzipped **BanjoMaster** folder directly onto the webpage.
3. Netlify immediately gives you a permanent, secure live link (e.g., <https://banjo-master.netlify.app>).
4. Open that link on your phone, or copy and text it to your friends!

### Option B: GitHub Pages (Free permanent URL)

1. Create a new public repository on GitHub (e.g., banjo-master).
  2. Upload the files (index.html, manifest.json, sw.js, icon-192.png, icon-512.png).
  3. In GitHub, go to **Settings** → **Pages**. Under *Build and deployment*, set Source to **Deploy from a branch** and select main / root.
  4. Your app will be live at <https://<your-username>.github.io/banjo-master/>.
- 

## 2. How to Install on Your Phone (Home Screen App)

Once you open the live link on your phone:

### On iPhone / iPad (Safari):

1. Open the link in **Safari**.
2. Tap the **Share** icon (the square with an upward arrow at the bottom of the screen).
3. Scroll down and tap **Add to Home Screen**.
4. Tap **Add** in the top-right corner.
5. BanjoMaster will appear as an app icon on your home screen. When launched, it opens

full-screen without browser address bars and works completely offline!

### On Android (Chrome):

1. Open the link in **Google Chrome**.
2. An **"Install app"** banner will appear automatically, or you can tap the **three dots (⋮)** in the top right.
3. Select **Install app** or **Add to Home screen**.
4. BanjoMaster is installed into your app drawer and home screen.

---

## 3. How to Share with Others in 1 Tap

- **In-Person (Jam Sessions & Lessons):** Tap the **"Share App"** button in the top navigation bar. It displays an on-screen **QR Code**. Anyone nearby can point their phone camera at your screen to open the app on their device instantly.
- **Remotely (Text / Social):** Tapping **"Share App"** on mobile launches the native sharing sheet to text the link via iMessage, SMS, WhatsApp, or AirDrop. You can also tap **"Copy Link"** to paste it anywhere.

---

## 4. Mobile-Specific Features

- **Camera Sheet Music Scanner:** In the *Sheet Music / Photo Input* tab, tap **"Snap with Camera"** to photograph music directly from a sheet or songbook on your music stand.
- **Mobile Voice Control:** Tap the microphone icon and speak chords or rolls hands-free while holding your banjo (requires microphone permission in Chrome/Edge/Safari).
- **Touch Fretboard:** Responsive touch interaction allows tapping frets or plucking strings directly on your phone screen.
- **Offline Service Worker:** The app caches all sound synthesizers and banjo geometry so you can practice even in areas without cell reception.
